

**AFTER APPLYING SUBSTANCE TO NEW TEST STRIP,
COMPARE RESULTS WITH COLOR INDICATIONS BELOW.**

**NEGATIVE
RESULTS —**

**TEST
ZONE** →

**NEW
STRIP**

**+ POSITIVE
RESULTS**

**POSITIVE
RESULTS:
Rapid
& intense
cherry
red hue** →

1. Remove test strip and swab from packaging.
2. Identify location of suspect residue. Insert supplied swab into residue.
3. Rub and mix swab through residue for 5-10 seconds and ensure sample is embedded in swab tip. Rub swab on strip test zone for 5 seconds.
4. Positive color indication will be a rapid and intense cherry red hue.
5. Time for positive indication: Rapid/Instant. Less than 2 seconds.
6. If no color indication observed after 10 seconds, suspect residue is unlikely to contain Cannabis material.
7. If positive, immediately take photographic evidence of test strip. Document time, date, location on reverse of test strip. Initiate relevant security plan.
8. Note: Some of test zone reagents may be removed into swab tip during dab/rub. This is NOT a positive reaction. Please check swab tip for positive color indication.
